

## DESCRIPTION:

The 7118SWX-F is a high-performance, high-output subwoofer system designed to compliment XYON™ line array systems in a variety of permanently-installed and live sound reinforcement applications.

The 7118SWX-F utilizes advanced components and technology to attain the highest performance levels. The use of a highly-efficient and high power-handling, yet lightweight, Neodymium driver results in massive output relative to size and weight.

The 7118SWX-F version is intended for flown applications and includes the integrated XYON™ Z-MAX modular rigging system. 7118SWX-F enclosures may be transported in two's or four's on DL-7118 Dolly Boards, and padded transports covers are available.

Recommended amp and cabling configurations are available, as well as DSP processor settings for many commonly used system controllers.

The 7118SWX-F is the perfect companion subwoofer for XYON™ 7108XY line array system. 7118SWX-F subwoofers may be flown at the top of 7108XY arrays or in separate bass hangs.
